

Dear,

Firstly, I would like to thank you in my heart for your valuable effort for this online voting system in your best capacity. Also, It is working properly. But there are a lot of changes to be corrected. Otherwise, this project is unable to acquire 100% productivity. So, please be kind enough to properly correct concerns with the given instructions below.

Thanks & Best Regards.

1. Concern 1 : Complex in project structure and not align with MVC architecture pattern.

While we are observing project structure, It is very complex to understand. Because there is not any separation as backend and frontend. All the codes are together and unable to find modules codes with their separate frontend and backend code. I hope you can remember that requested to align project structure very simply and comment the all the codes functions to understand their tasks for us at beginning of the project. So, please rearrange project structure to understand easily with proper deviation with frontend and backend codes with their comments.

- System Architecture: Client - Server Architecture
- System Architectural Pattern: Model - View - Controller (MVC)

Example :

Unable to find Voter backend codes together with frontend codes properly.

There is screenshot for your further reference to understand the complex project structure below.

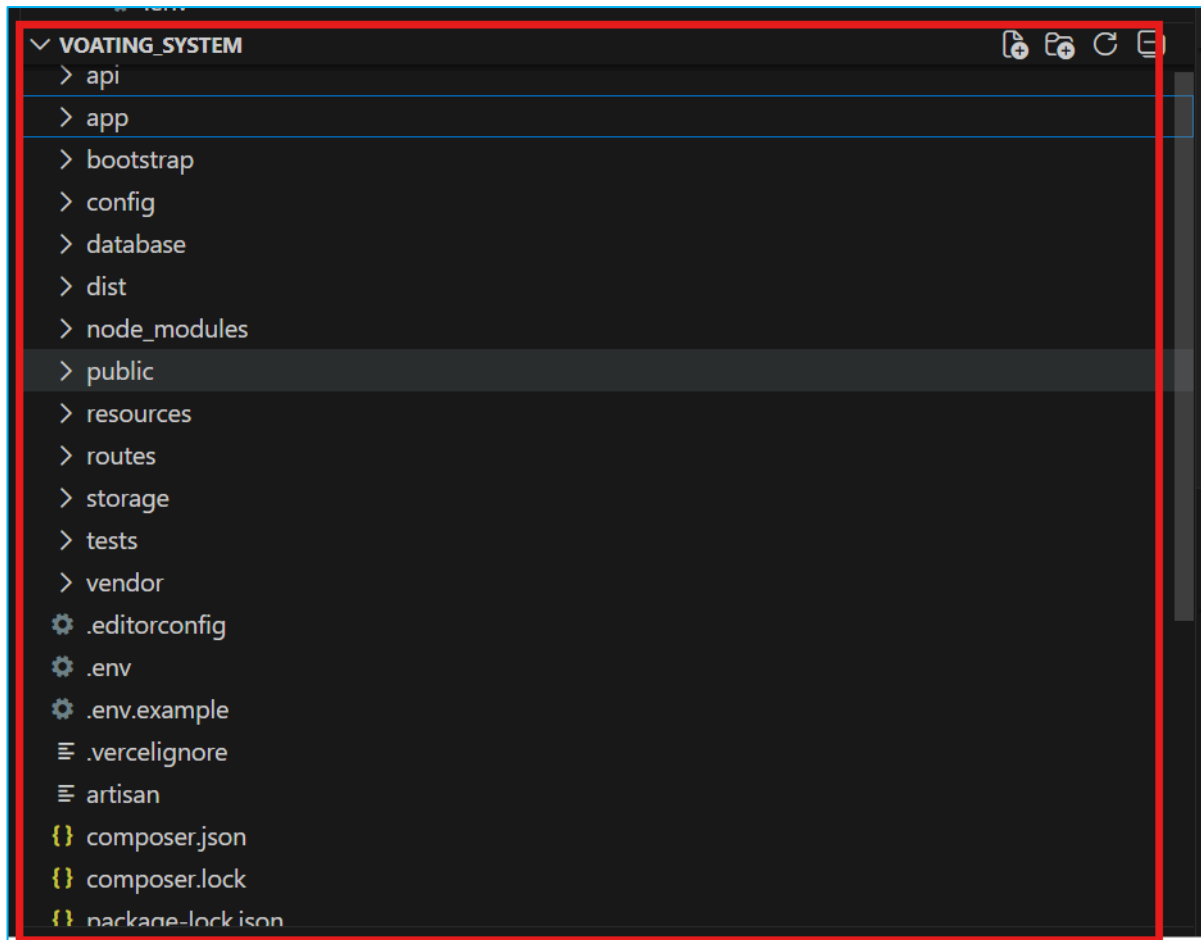

Figure 1 Project Structure

2. Concern 2 : Separate Login for All three types of users (Voter, Election Officer, Admin) in one window.

Please rearrange login window separately for all three types of users. You can customize this login window for voters, election officer and admin. It means that please mentioned selective or dropdown option while login.

Examples :

If voter login, please show selective or dropdown option as voter and enter email address, password. Also, please show both forget password option and signup option. Do not conflict logging credentials with user roles such as election officer and admin.

If election officer login, please show selective or dropdown option as election officer and enter email address, password. Please show both forget password option and signup option. In election offices are approved by system admin, his email address is valid for signup as election officer. So, in signup option of election officer should include only approved voter's email and create password and confirm password with 8 characters. Do not conflict logging credentials with user roles such as voter and admin.

If admin login, please show selective or dropdown option as admin and enter email address, password. Not showing signup option. Only show change password option for admin password. Do not conflict logging credentials with user roles such as election officer and voter.

Also, please keep in mind that all registered voters can represent as candidates and election officer user roles. It means that there are not any conflicts of any user roles together. Their functions are separate and work properly without any issues in the system.

If system admin is approved an election officer request, he can work functions in election officer dashboard properly with his election officer credentials. Also, this respective election officer is logged as voter using his voter credentials in voter logging, he can work in his voter dashboard properly without any issues.

Specially do not specialize them in database and system for one user role only. They can act as election officers or voters with their different logging credentials without any conflicts in the system.

If election officer selects someone as candidate, he will show as candidate only in database. It is entirely wrong. If candidate logged as voter to vote for election from his voter logging credentials, Unfortunately, he is unable to vote and unable to see the election. It violates independence integrity of voting for election as voter.

Also, I mentioned candidate procedure in detail for your further reference under concern 3 : create election process issue of section 3.3 below. Please refer to it well.

There are screenshots for your further reference to understand the login separation below.

Gender	Candidate	Age
male	admin	\$2
male	election_officer	\$2
male	candidate	\$2
male	candidate	\$2
male	candidate	\$2
female	candidate	\$2

Figure 2.1 User Role Issues

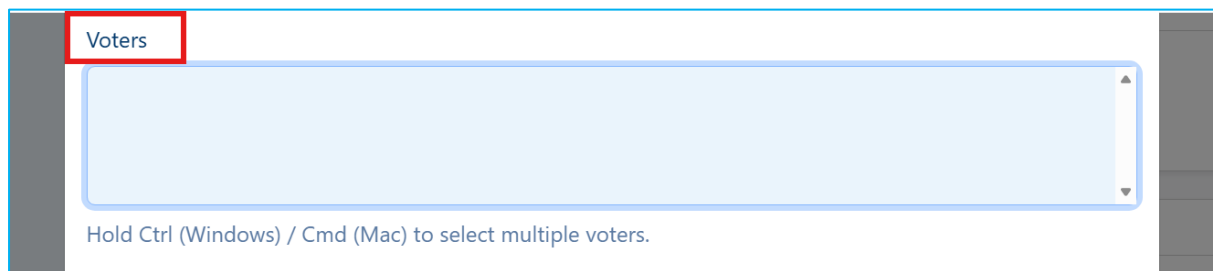

Figure 2.2 Voter Issues as User Role

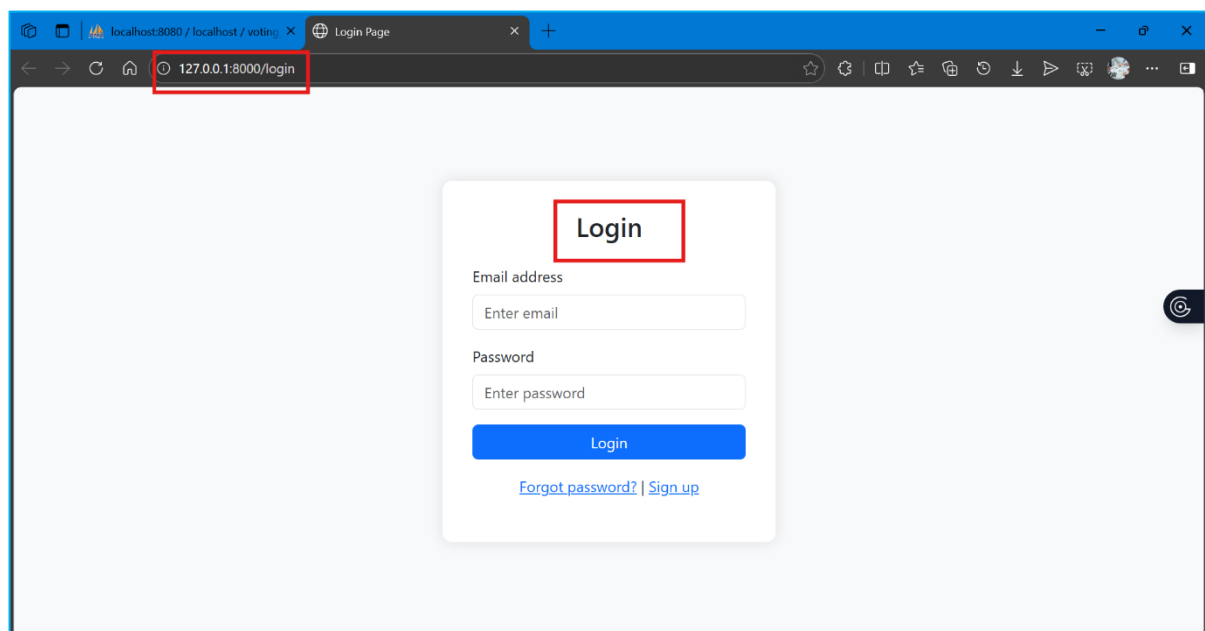

Figure 2.3 Login Option

3. Concern 3 : Create Election Issues in Election Officer Dashboard and Voter Dashboard.

3.1 Please remove enrollment option and it is relevant to all components in election officer dashboard. Because it is not essential component to election officer dashboard.

There is screenshot for your further reference to understand the enrollment option below.

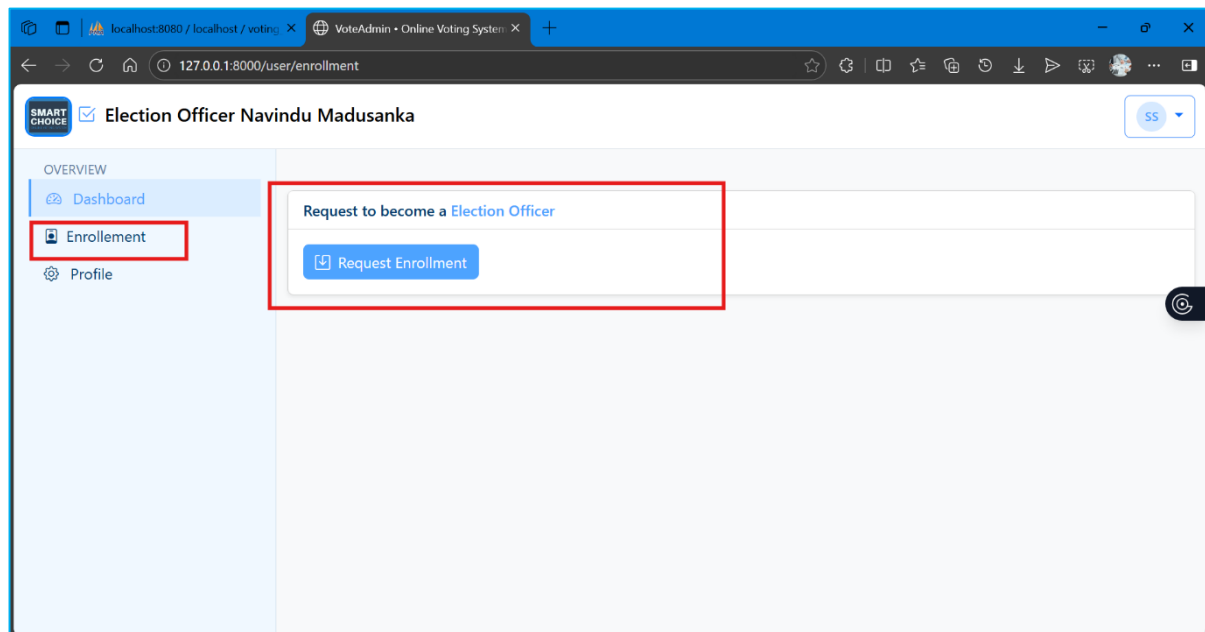

Figure 3.1 Enrollment Option

3.2 Please remove profile information from the election officer dashboard.

There are screenshots for your further reference to understand the profile image below.

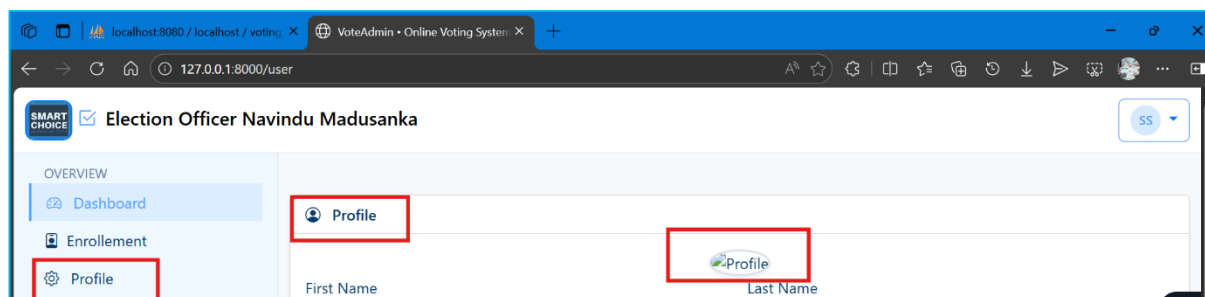

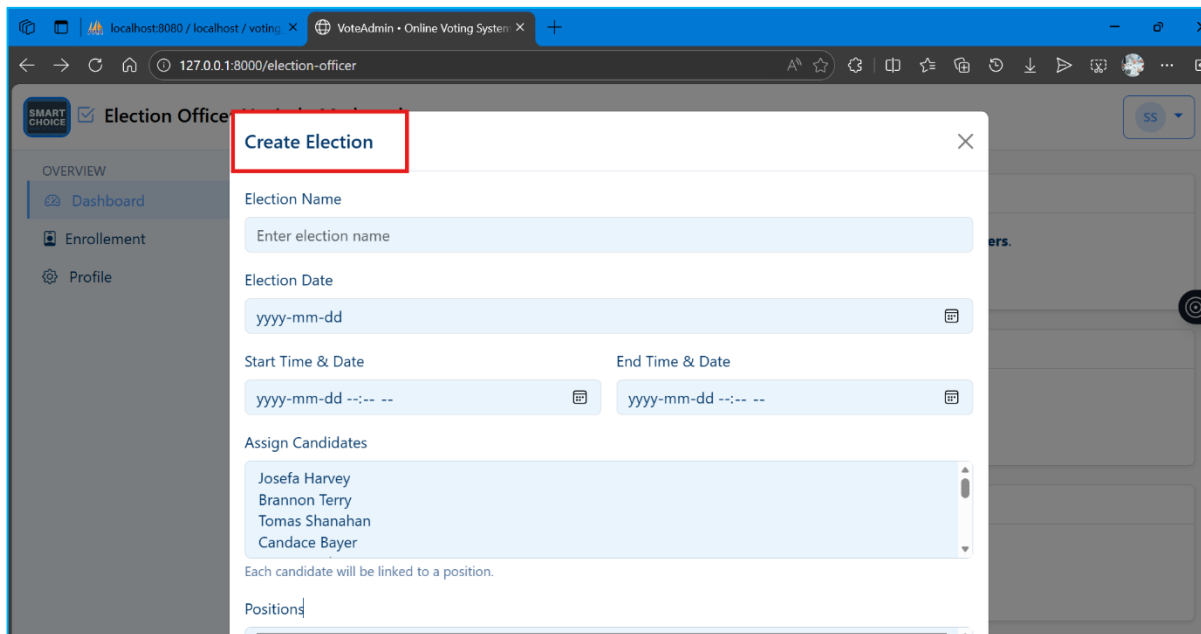

Figure 3.2.1 Profile Tab Election Officer

3.3 As mentioned earlier of the create election process, entirely misunderstood the create election process. So, please be kind enough to correct create election process again from beginning to end.

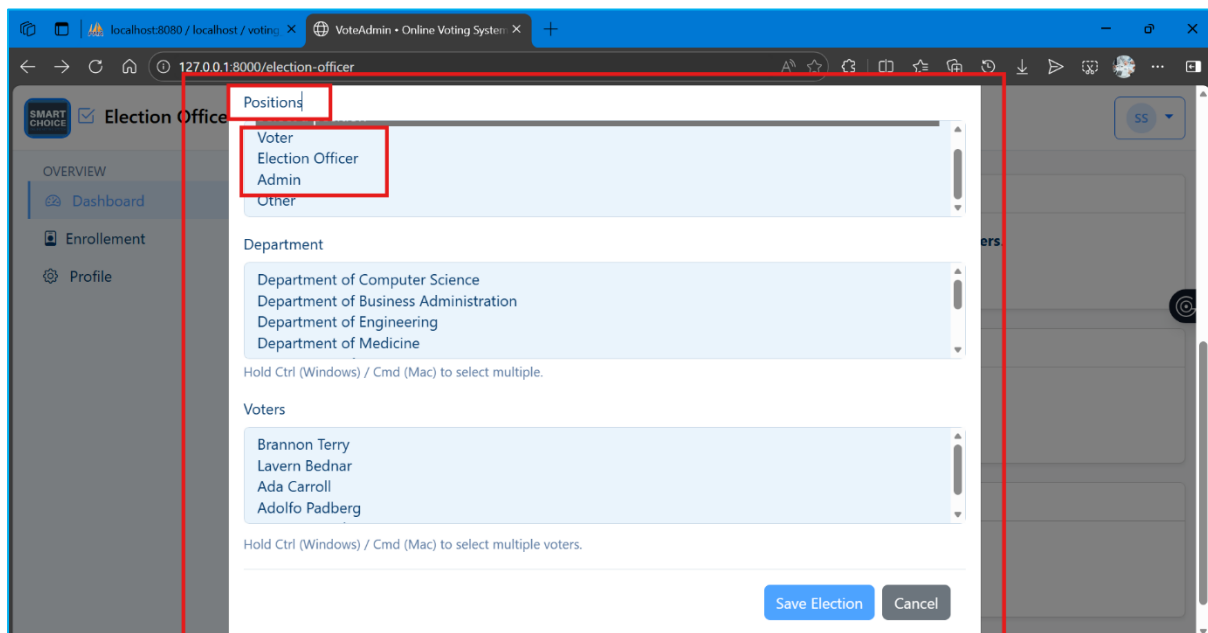

There are screenshots for your further reference to understand the create election process below.

The screenshot shows the 'Create Election' form in the VoteAdmin system. The form is titled 'Create Election' and is located in the 'Election Office' section. It contains the following fields:

- Election Name:** A text input field with the placeholder 'Enter election name'.
- Election Date:** A date input field with the placeholder 'yyyy-mm-dd'.
- Start Time & Date:** A date and time input field with the placeholder 'yyyy-mm-dd --:-- --'.
- End Time & Date:** A date and time input field with the placeholder 'yyyy-mm-dd --:-- --'.
- Assign Candidates:** A list of candidates: Josefa Harvey, Brannon Terry, Tomas Shanahan, and Candace Bayer. Below the list is a note: 'Each candidate will be linked to a position.'
- Positions:** A text input field.

Figure 3.3.1 Create Election Process

The screenshot shows the 'Positions' dropdown menu in the 'Create Election' form. The dropdown is open, showing the following options:

- Voter
- Election Officer
- Admin
- Other

Below the dropdown is a 'Department' section with a list of departments: Department of Computer Science, Department of Business Administration, Department of Engineering, and Department of Medicine. Below this is a note: 'Hold Ctrl (Windows) / Cmd (Mac) to select multiple.' Below the departments is a 'Voters' section with a list of voters: Brannon Terry, Lavern Bednar, Ada Carroll, and Adolfo Padberg. Below this is a note: 'Hold Ctrl (Windows) / Cmd (Mac) to select multiple voters.' At the bottom right of the form are two buttons: 'Save Election' and 'Cancel'.

Figure 3.3.2 Create Election Process

Additionally, without department selections, elections can be saved and proceed further.

Create Election Process Should be correct as below

- **Phase 1: Election Creation and Nomination Setup (Election Officer)**

When an election officer begins creating a new election, the process follows this sequence:

Step 1 - Initial Election Setup: The election officer creates the basic election structure through their dashboard. At this stage, they define the election positions (such as President, Vice President, Secretary, etc.) and establish a nomination period with specific start and end times. During this phase, they do not yet set the actual voting dates or finalize other election details that come later, after candidates have been confirmed.

Step 2 - Publishing Nomination Period: Once the election officer publishes the nomination period, the system automatically makes these positions visible to all registered or customized voters in their Voter Dashboard. Respective voters can now see which positions are open for nomination and the deadline for self-enrollment. It's important to note that the election officer cannot modify or delete the nomination period once it's published, this ensures fairness and prevents manipulation of the nomination process.

- **Phase 2: Candidate Self-Enrollment (Voter Side)**

During the active nomination period, registered respective voters have specific options available to them:

Self-Nomination Process: Any registered respective voter can nominate themselves as a candidate through the self-enrollment option in their Voter Dashboard. However, there's a critical restriction: each voter may only self-nominate for one position within the same election. If a voter attempts to nominate themselves for multiple positions, the system should prevent this action and display a clear message explaining that they can only be a candidate for one position per election.

Un-enrollment Option: If a voter changes their mind during the nomination period, they should have the ability to withdraw their candidacy through a self-un-enroll option. Once they

un-enroll, they could potentially nominate themselves for a different position (still limited to one position total), as long as the nomination period remains open.

Visibility to Election Officer: All self-nominated voters appear immediately in the Election Officer Dashboard under a pending candidates section for the respective election. This allows the election officer to monitor who has nominated themselves in real-time.

- **Phase 3: Candidate Review and Assignment (Election Officer)**

After the nomination period closes automatically at the specified end time, the election officer moves into the candidate review phase:

Review Authority: The election officer reviews each self-nominated voter and makes one of two decisions for each nominee:

First, they may approve the nomination, which officially assigns that voter as an eligible candidate for their chosen position. The system should update the voter's dashboard to show their "Approved" or "Confirmed Candidate" status for that position.

Second, they may reject the nomination, which means that voter will not appear as a candidate option when voting begins. The system must clearly display the "Rejected" or "Not Approved" status in the voter's dashboard, so they understand they were not selected as an eligible candidate. This transparency is important for voter awareness.

Automatic Ineligibility: If a voter did not self-nominate during the nomination period, they are automatically ineligible to be a candidate for any position in that election. The election officer does not need to take any action for these voters; they simply never appear in the candidate pool.

- **Phase 4: Final Election Configuration (Election Officer)**

Once all candidate assignments are complete, the election officer proceeds to finalize the election:

Voter Assignment: The election officer selects which registered voters are eligible to vote in this election. Only these assigned voters will see the election appear in their Voter Dashboard under the "Ongoing Elections" section when voting begins.

Final Details Entry: Now the election officer enters the complete election details including the election name, official election date, voting start time, voting end time, and any other relevant information. This is also when the election officer confirms all positions and their respective approved candidates.

None of the Above Option: For each position in the election, the system must automatically include a "None of the Above" option as a default choice. This allows voters to indicate they do not support any of the available candidates for that particular position. The election officer does not need to manually add this option, it should be built into the system for every position automatically.

- **Phase 5: Publishing and Conducting the Election**

Publishing Restrictions: When the election officer publishes the finalized election, the system locks all election details permanently. No editing is permitted after publication, not the positions, not the candidates, not the voting times, not the eligible voters. This immutability ensures election integrity.

Election Visibility: Once published and when the voting start time arrives, the election automatically appears in the "Ongoing Elections" section of the Voter Dashboard for all eligible voters who were assigned by the election officer. These voters can now cast their votes for each position, including selecting the "None of the Above" option if they choose.

The election remains visible and ongoing (ongoing elections) in the Election Officer Dashboard as well, allowing the officer to monitor the election status until the voting end time is reached. Display real-time voting statistics and progress in very simply and attractively. Do not reveal voters' votes for candidates at any time.

4. Concern 4 : Voter Dashboard Issues with Functions.

4.1 Election is finished. But it still appears in ongoing elections in over dashboard. It should be correct.

There is screenshot for your further reference to understand the ongoing election issue below.

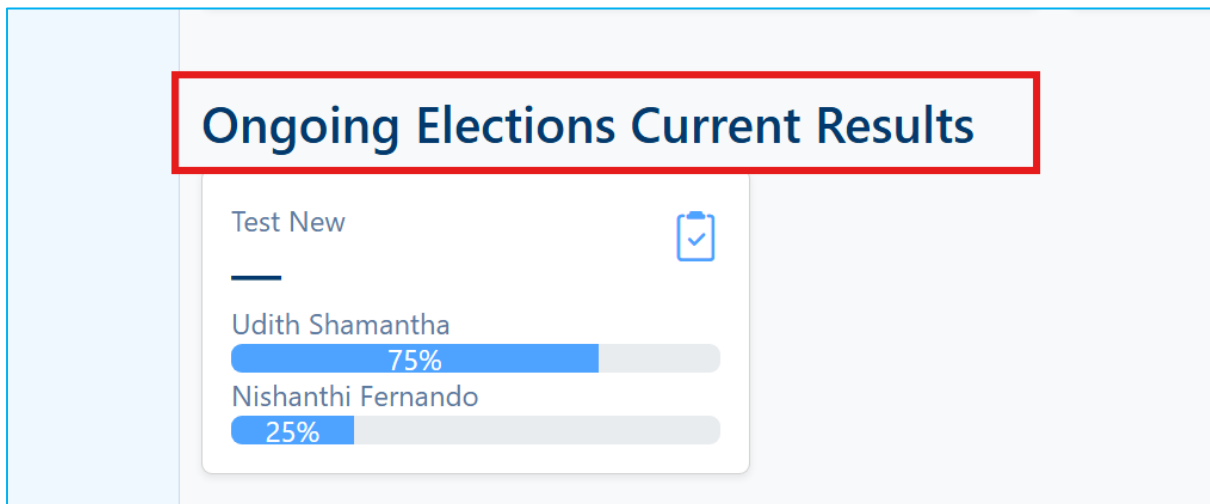

Figure 4.1 Ongoing Election Issue

4.2 Not clearly display several positions to vote with candidates. Only display candidates. Also, not none above option vote.

Please correct this issue properly as previously mentioned in concern 3 under section 3.4.

There is screenshot for your further reference to understand the position and none above option issue.

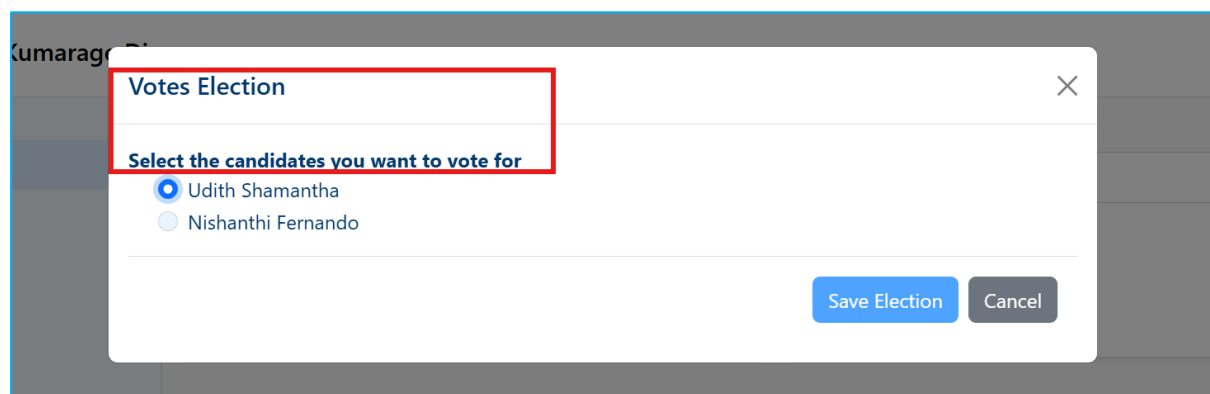

Figure 4.2 Position and None Above Option Issue

4.3 Only three voters participated in election. But vote counts were four. Also, before OTP enters we have to save our voting process is entirely wrong. Because if we save our vote before OTP enter, the system is stored the vote. Vote should be stored after OTP entered. Specially, when we click the save election option twice continuously, system is stored vote as twice time. This is also wrong. Also, OTP does not have any specific time to enter. It is also wrong. If OTP typing specific time is exceed, please show get OTP option again before entire voting period end in that respective election. Remember again after successful OTP enter is valid and stored voter's vote for count for position only.

There is screenshot for your further reference to understand the voting participation count below.

Test New Final Result			
Election Name: Test New			
Total Votes Count: 4			
ID	Candidate Name	Vote Count	Vote Percentage
1	Udith Shamantha	3	75 %
2	Nishanthi Fernando	1	25 %

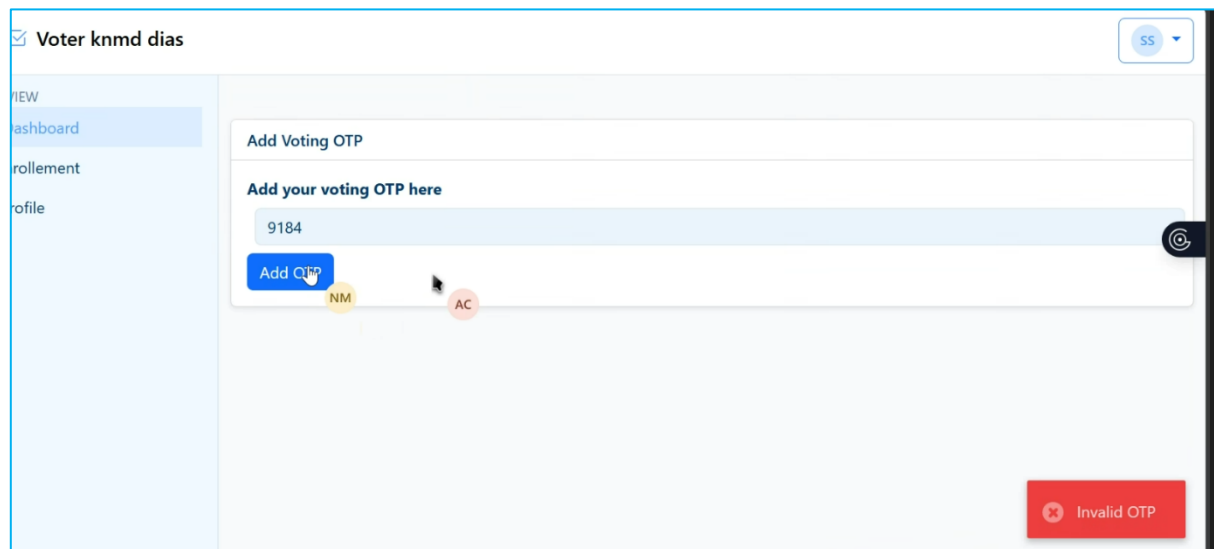

Figure 4.3.3 OTP Time Issue

4.4 Voter dashboard result election pdf is not included in any graph chart.

Remember Final Election Results pdf are included the number of assigned and eligible voters with students Numbers, the number of voters who voted with students's numbers, vote counts for each candidate, and the winner candidates with their images (If equal candidates for same position, it should be also displayed). Display data with attractive graphs, tables, and pie charts. Do not reveal voters' votes for candidates at any time.

There is screenshot for your further reference to understand the result pdf issue below.

Test New Final Result			
Election Name: Test New			
Total Votes Count: 4			
ID	Candidate Name	Vote Count	Vote Percentage
1	Udith Shamantha	3	75 %
2	Nishanthi Fernando	1	25 %

4.5 Voters profile image is not loading.

There are screenshots for your further reference to understand the profile image loading issue below.

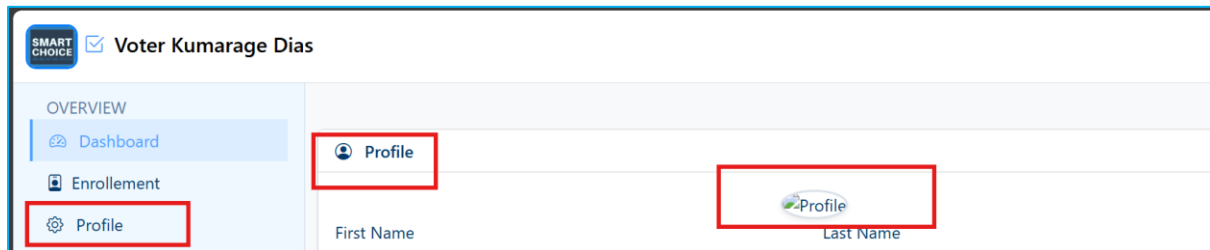

Figure 4.5 Profile Image Loading Issue

4.6 Voter request as election officer issue.

If voters request as election officer, it should be display in enrollement tab in system admin. If system admin rejects it, voters are unable to act as election officers. But unfortunately, voters will show as election officers in database also. It should be correct. Also, please remember as mentioned earlier under concern 2, approved election officer has separate login credentials for election officer dashboard and voter login credentials also are active for voter dashboard. Dual user roles are active without any issues and conflicts to run the system.

There are screenshots for your further reference to understand the request for the election officer issue below.

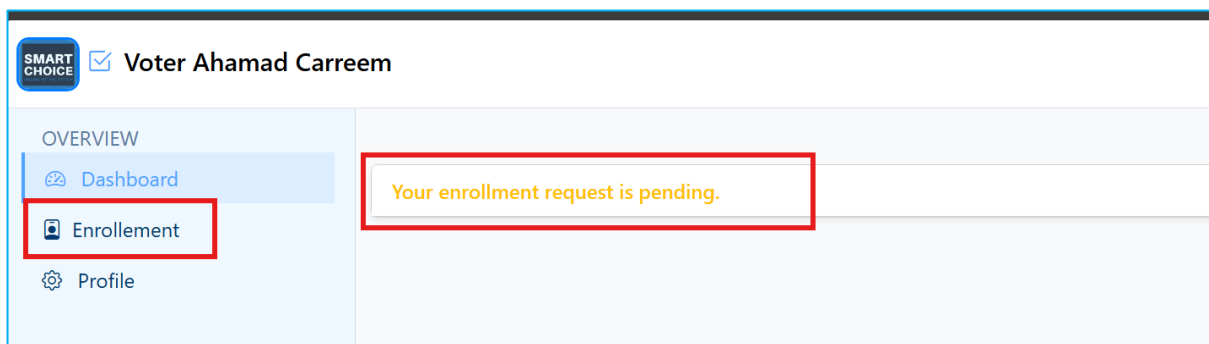

Figure 4.6.1 Requested as Election officer

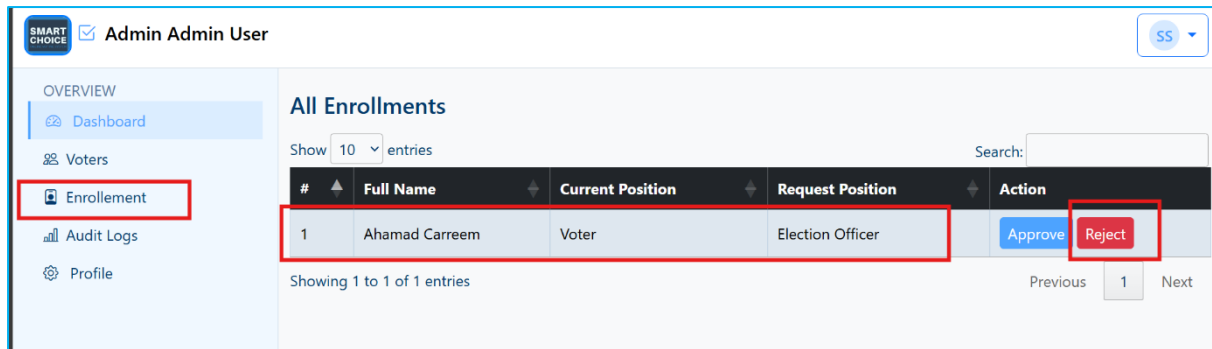

Figure 4.6.2 Admin Rejected Election Officer Request

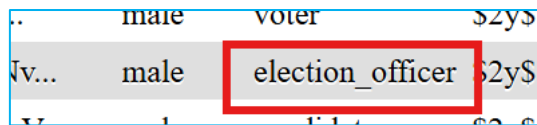

Figure 4.6.3 Database Issue

4.7 Deletion of Voter account Issue.

There are errors coming while deleting voter account. Please correct it properly. Deletion of voters accounts should be removed from admin dashboard and database also. In addition to that if voter is an election officer, all the credentials of election officer are permanently deleted.

There are screenshots for your further reference to understand the deletions of voters accounts issues below.

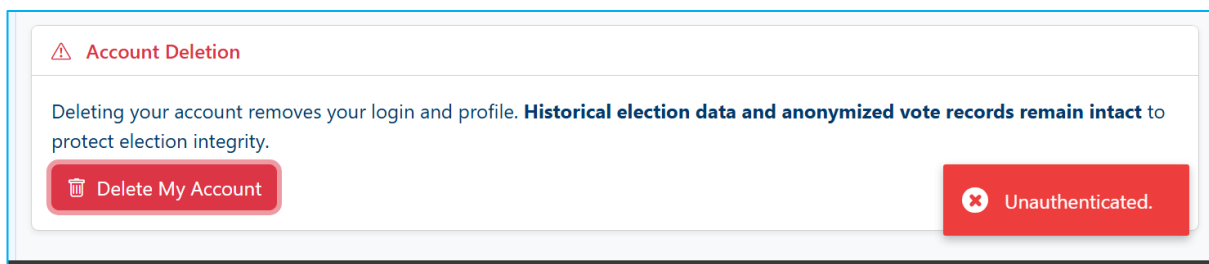

Figure 4.7.1 Deletion of Voter Account

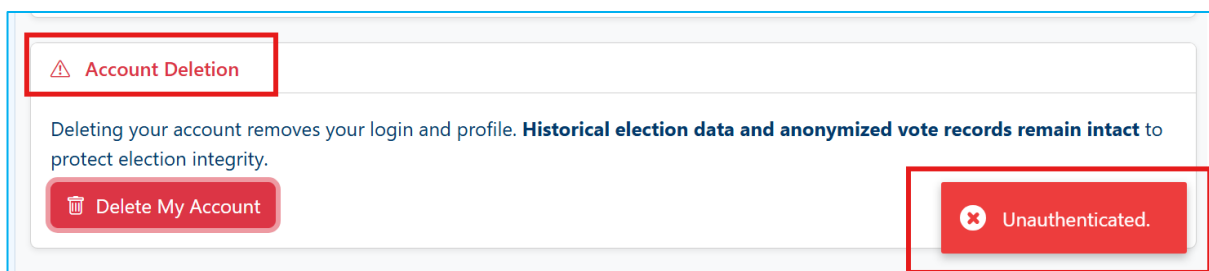

Figure 4.7.2 Deletion of Voter Account

5. Concern 5 : Election officer Dashboard Issues with Functions.

5.1 Election is finished. But it still appears in ongoing elections in election officer dashboard. Also, not showing in completed election results tab in election officer dashboard. It should be correct.

There are screenshots for your further reference to understand the ongoing election tab issue and completed election result tab issue below.

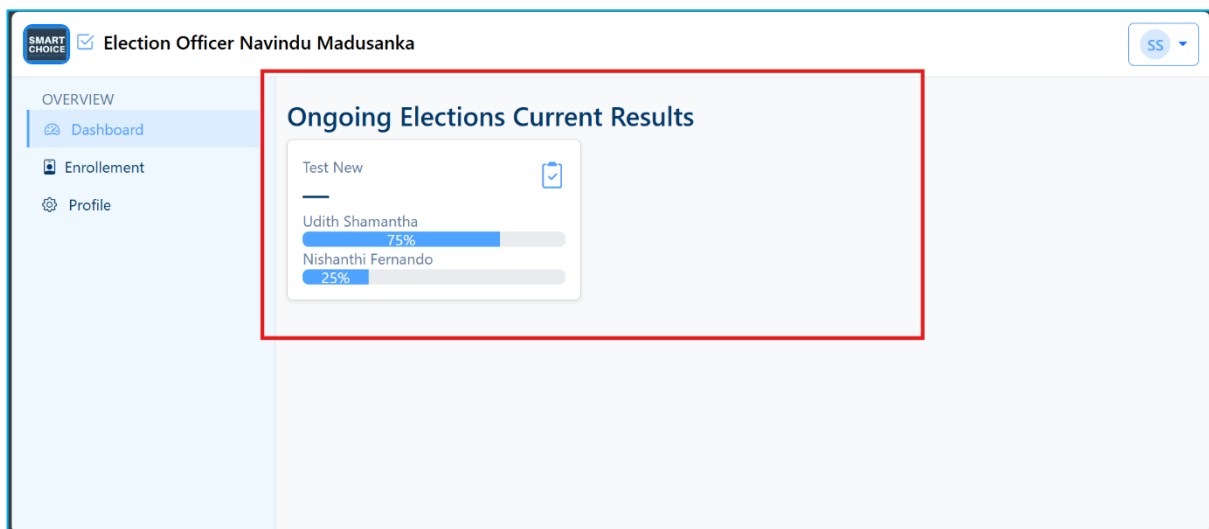

Figure 5.1.1 Ongoing Election Tab Issue

Figure 5.1.2 Completed Election Results Tab Issue

6. Concern 6 : Admin Dashboard Issues with Functions.

6.1 When logged as admin, admin dashboard shows some buttons and functions. But they are not working. Please be kind enough to remove all these functions entirely.

Also, please check admin is unable to go back to dashboard tab. It is not working. Please correct properly.

There is screenshot for your further reference to understand the unworking functions issues below.

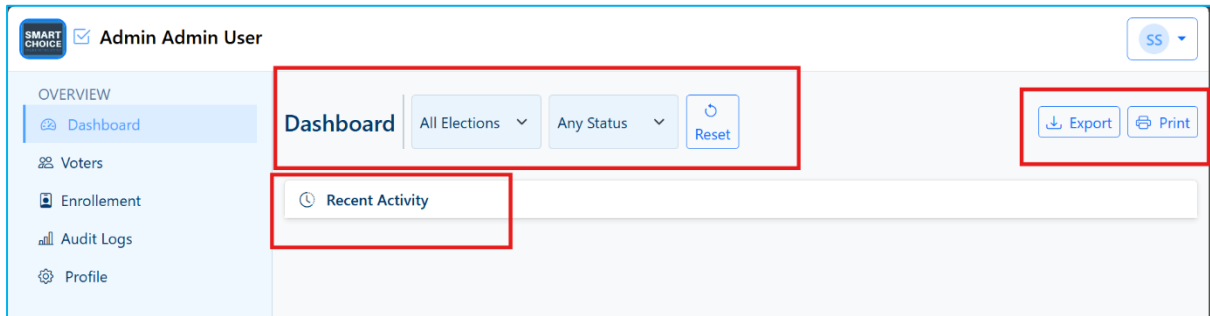

Figure 6.1 Not Working Functions

6.2 Remove Profile Information in Admin Dashboard.

Please remove entire profile information from the admin dashboard.

There is screenshot for your further reference to understand the Profile Information issue below.

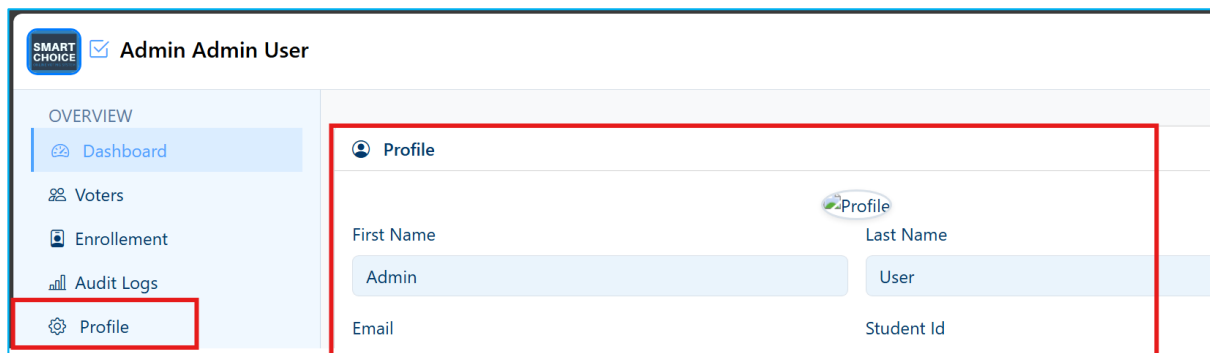

Figure 6.2 Profile Information Issue in Admin Dashboard

6.3 Show Notification Bubble in Enrollment tab to identify admin easily for requests arrivals.

Please add notification bubble for enrollment options to identify easily for requests arrivals.

There is screenshot for your further reference to understand the notification bubble below.

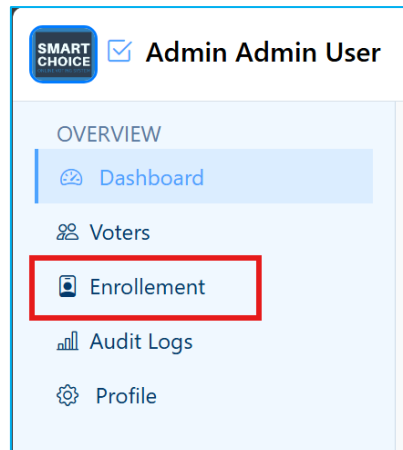

Figure 6.3 Notification Bubble

6.4 All the voters should be displayed under voters tab in admin dashboard.

As mentioned previously in concern 2 above, please be kind enough to remember that all registered voters should be displayed there. Also, remember that if voter is election officer or candidate, it should be no conflicts to show in there as registers voters. User types such as voter, and election officer are not conflicts and work properly independently. If delete any voter from admin dashboard, remove all the credentials such as election officer login and remove from database also.

There is screenshot for your further reference to understand the registered voters in admin dashboard below.

The screenshot shows the 'Admin Admin User' dashboard with the 'All Voters' tab selected. The table displays a list of voters with columns for #, First Name, Last Name, Email, and Action. The table is highlighted with a red box.

#	First Name	Last Name	Email	Action
1	Brannon	Terry	curt81@example.org	Delete
2	Lavern	Bednar	ewintheiser@example.org	Delete
3	Ada	Carroll	laverne.lockman@example.net	Delete
